Sample-trial preparation
样件试洗准备清单

V1 / 2026-11-09 · Trial planning / 试洗规划

Agree the trial scope and practical arrangements with the team before shipping samples. /
寄送样件前，与团队确认试洗范围和具体安排。

1 / Question 评价问题	What problem should the trial resolve? Define the required part condition and inspection method. 试洗要解决什么问题？明确所需状态和检查方法。
2 / Sample 代表样件	Provide representative materials, coatings, residue and normal incoming conditions. 提供代表性材料、涂层、污垢及正常来料状态。
3 / Restrictions 适用限制	List sensitive surfaces, prohibited chemistry or methods, and handling constraints. 列出敏感表面、禁止介质或方法及搬运限制。
4 / Load 装载	Record basket arrangement, fixtures, orientation, quantity and full weight. 记录篮筐、夹具、朝向、数量和总重量。
5 / Process log 过程记录	Identify equipment and record the actual stages, medium, time, temperature and frequency where known. 识别试验设备，记录实际工位、介质、时间、温度及已知频率。
6 / Evidence 结果依据	Use consistent before/after images and the agreed inspection. Preserve failed or incomplete results. 前后图保持一致条件，并按约定检测；保留未通过或未完成的结果。
7 / Next step 下一步	State limitations, differences from production and whether another trial is needed. 说明限制、与量产的差别及是否需要继续试洗。

Important distinction / 状态区分

A sample trial is not a delivered equipment project. A clean-looking surface is not proof of a specified cleanliness standard. Numerical conditions from one sample are not a universal recipe.
样件试洗不是设备交付；外观看起来干净不等于满足特定清洁度标准；单个样件数值条件不是通用工艺。
